

1. Exceptions:
Introduction
2. Exception: Types

Exceptions: Introduction

Exceptions: Introduction

Something is going wrong

throw

Do something to keep
the application working.

catch

Error vs Exception

Error

Irrecoverable situation

Related to environment

There is no programable fix

Exception

Recoverable situation

Related to application

May be anticipated and should be handled

Error vs Exception

Error

- Irrecoverable situation
- Related to environment
- There is no programable fix

Exception

- Recoverable situation
- Related to application
- May be anticipated and should be handled

`OutOfMemoryError`

Error vs Exception

Error

Irrecoverable situation
Related to environment
There is no programable fix

`OutOfMemoryError`

Exception

Recoverable situation
Related to application
May be anticipated and should be handled

`ArrayIndexOutOfBoundsException`

Error vs Exception

Error

- Irrecoverable situation
- Related to environment
- There is no programable fix

`OutOfMemoryError`

`class Error`

Exception

- Recoverable situation
- Related to application
- May be anticipated and should be handled

`ArrayIndexOutOfBoundsException`

`class Exception`

Class Throwable

Error and Exception classes inherit from Throwable superclass

Class Throwable

Constructors

Modifier	Constructor and Description
	<code>Throwable()</code> Constructs a new throwable with <code>null</code> as its detail message.
	<code>Throwable(String message)</code> Constructs a new throwable with the specified detail message.
	<code>Throwable(String message, Throwable cause)</code> Constructs a new throwable with the specified detail message and cause.
<code>protected</code>	<code>Throwable(String message, Throwable cause, boolean enableSuppression, boolean writableStackTrace)</code> Constructs a new throwable with the specified detail message, cause, suppression enabled or disabled, and writable stack trace enabled or disabled.
	<code>Throwable(Throwable cause)</code> Constructs a new throwable with the specified cause and a detail message of <code>(cause==null ? null : cause.toString())</code> (which typically contains the class and detail message of <code>cause</code>).

Class Throwable

Methods	
Modifier and Type	Method and Description
void	addSuppressed(Throwable exception) Appends the specified exception to the exceptions that were suppressed in order to deliver this exception.
Throwable	fillInStackTrace() Fills in the execution stack trace.
Throwable	getCause() Returns the cause of this throwable or null if the cause is nonexistent or unknown.
String	getLocalizedMessage() Creates a localized description of this throwable.
String	getMessage() Returns the detail message string of this throwable.
StackTraceElement[]	getStackTrace() Provides programmatic access to the stack trace information printed by printStackTrace() .
Throwable[]	getSuppressed() Returns an array containing all of the exceptions that were suppressed, typically by the try-with-resources statement, in order to deliver this exception.
Throwable	initCause(Throwable cause) Initializes the <i>cause</i> of this throwable to the specified value.
void	printStackTrace() Prints this throwable and its backtrace to the standard error stream.
void	printStackTrace(PrintStream s) Prints this throwable and its backtrace to the specified print stream.
void	printStackTrace(PrintWriter s) Prints this throwable and its backtrace to the specified print writer.
void	setStackTrace(StackTraceElement[] stackTrace) Sets the stack trace elements that will be returned by getStackTrace() and printed by printStackTrace() and related methods.
String	toString() Returns a short description of this throwable.

Implicit vs Explicit

Implicit

RunTimeExceptions

May/Should be controlled

Can't be worked around in run time

Explicit

Not RunTimeExceptions

Must be controlled

May be worked around in run time

Implicit vs Explicit

Implicit

RunTimeExceptions

May/Should be controlled

Can't be worked around in run time

Explicit

Not RunTimeExceptions

Must be controlled

May be worked around in run time

Implicit Exception

Example

```
Public class Main {  
    public static void main (string[]){  
        String filename=null;  
        if (filename.contains("aaaa")){  
            //TODO code application  
        }else{  
            //TODO code application  
        }  
    }  
}
```

Implicit Exception

Example

```
Public class Main {  
    public static void main (string[]){  
        String filename=null;  
        if (filename.contains("aaaa")){  
            //TODO code application  
        }else{  
            //TODO code application  
        }  
    }  
}
```

java.lang.NullPointerException

Implicit vs Explicit

Implicit

RunTimeExceptions

May/Should be controlled

Can't be worked around in run time

Explicit

Not RunTimeExceptions

Must be controlled

May be worked around in run time

NullPointerException

unchecked

Implicit vs Explicit

Implicit
